## **Public Institution Vehicle Restrictions Lifted as Resource Security Alert Eases**

- Public institution vehicle restrictions and public parking lot vehicle rotation system lifted
- Energy conservation measures to continue until oil supply stabilizes

The Ministry of Climate, Energy and Environment (MCEE, Minister Kim Sungwhan) announced that, as international oil supply conditions have improved with the recent resumption of transit through the Strait of Hormuz and other developments, the national resource security alert has been lowered from the “Warning” level to the “Caution” level. Accordingly, the mandatory alternate-day use system for passenger vehicles at public institutions will be fully lifted effective 12:00 a.m. on July 1.

Effective 12:00 a.m. on July 1, the mandatory alternate-day system for passenger vehicles at public institutions will be lifted, and each institution will resume operating its voluntary weekday vehicle rotation program as usual.

※ In accordance with the Regulations on the Promotion of Rational Energy Use by Public Institutions, each public institution continues to implement routine energy conservation measures, including maintaining appropriate indoor temperatures, using lighting efficiently, and operating a voluntary weekday vehicle rotation program.

In addition, as oil supply conditions have partially improved, the five-day rotation system for passenger vehicles at public parking lots, which had been implemented to encourage voluntary reductions in vehicle use, will also be lifted effective 12:00 a.m. on July 1. Accordingly, visitors to public

institutions, including members of the public using public parking facilities, will no longer face any restrictions on vehicle access.

The MCEE estimated that the mandatory alternate-day system for passenger vehicles at public institutions and the five-day rotation system for passenger vehicles at public parking lots reduced oil consumption by 160,090 barrels per month, an amount sufficient to fuel approximately 480,000 passenger vehicles.

The MCEE also announced that, to date, 81 private companies and business organizations have voluntarily participated in vehicle rotation programs (two-day, five-day, or ten-day rotation systems). It added that, until the resource security crisis is fully resolved, it will continue efforts to expand energy conservation across the private sector through initiatives such as the energy-saving campaign based on the 12 National Energy Conservation Actions.

In addition, as uncertainty surrounding oil supply conditions remains, the government will continue to closely monitor the energy supply situation, including vessel transit through the Strait of Hormuz. If signs of disruption to the domestic supply chain are detected or exceptional developments occur, such as the reclosure of the Strait of Hormuz, the government will be fully prepared to immediately implement energy conservation measures.

Park Deokyeol, Director General for Hydrogen and Heat Industry Policy Bureau at the MCEE, stated, “We sincerely appreciate everyone who has cooperated despite the inconvenience caused by the prolonged implementation of the mandatory alternate-day system for passenger vehicles at public institutions and the five-day rotation system for passenger vehicles at public parking lots. We also thank the public and businesses that have voluntarily participated in energy conservation. Although the resource security alert has been downgraded, uncertainties remain, and we ask for your continued

participation in energy-saving efforts.”

붙임. 12대 에너지 절약 국민행동 포스터. 끝.

담당 부서	기후에너지환경부 에너지안전효율과	책임자	과 장	김용운 (044-203-3984)
		담당자	사무관	한주영 (044-203-3981)

# 자원안보위기 경보 발령에 따른 에너지절약 국민행동

## 이동할 때

승용차 5부제(요일제)  
참여하기

대중교통 이용하기

친환경 운전하기

가까운 거리는  
걷거나 자전거타기

## 회사에서

적정 실내온도 준수  
(난방 20°C, 냉방 26°C)

불필요한 조명 끄기

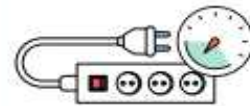

샤워시간 줄이기

주택용 에너지캐쉬백,  
도시가스 절약 캐쉬백 참여하기

## 가정에서

저녁시간(5~8시) 가전제품  
효율적으로 이용·절약하기

전기차·휴대폰은  
낮시간에 충전하기

고효율 가전제품 구매하고,  
조명은 LED로 교체하기

세탁기, 청소기는  
주말에 사용하기
